2- Abdullah Ayman	21-101131
3- Ahmed Tarek	21-101141
4- Ammar Wael	21-101152
5- Omar Essam	21-101029

Our project :

Our idea is an online shop. We have made 2 versions of this project, one using CPP, and the other using JAVA, we used MYSQL as a database in the java version, and we have used input/output files in the CPP version.

Members' roles:

Note that we all worked together throughout the whole project , but everyone of us had a touch,

Abdullah Ayman : database for java version

Asem Elenawy : database for CPP version

Omar Essam : OOP logic for java version

Ahmed Tarek : OOP logic for CPP version

Ammar Wael : logic & detecting errors

Problems we have faced :

-Actually we have faced many problems , we made MYSQL database for the cpp version but at the end we faced many problems connecting the database to VS , we have searched a lot but unfortunately , we couldn't solve the error , so we replaced it with input/output files , we have faced a lot of errors but we managed to handle them .

New concepts we have learnt :

- MYSQL database
- fstream files
- Git /github
